

# iArchives

Discover the depths of your data.

# Eureka!

There's a wealth of information lying deep within your piles of books, files, documents and microfilm—and you've just found a way to locate every piece you need. It's called iArchives, the technology that makes finding the valuable details in your data almost effortless. By converting all of your microfilm and paper-based documents (from publications and paperwork to receipts and office records) into a searchable database, iArchives gives you the power to dig through millions of words in minutes. It's a money, and (need we mention) kind of solution you've

## Unearth huge savings

The time you'll save using iArchives technology is apparent from the first key word you enter. Using designated parameters, the software sifts through your entire database of information—and returns with a high-quality image of the original document. There's no rifling through pages, no staring at rolls of microfilm. Just a few seconds for amazingly accurate results.

Time isn't the only potential savings you'll find. Using the iArchives process costs far less than most traditional archiving or information retrieval methods. (In fact, digitizing a page using the searchable iArchives process costs about as much as photocopying it.) Plus, iArchives images require no maintenance or re-filing, are immediately accessible,

and book page, *below*

process that saves time, headaches. And that's just the been searching for.

and can offer your organization a tremendous return on investment.

## Original documents: the richest resource

As a high-quality scan of the original document, an image processed via iArchives offers a better point of reference in your research. You can access surrounding information like photos and incidental data, plus see a true representation of signatures, typography, and other unique characteristics.

## "Wysiwyg"

What you see is what you get—in TIFF, PDF, or other formats. Besides being able to view a document in its original form, you have the option of saving in a searchable PDF format—perfect for saving to disk or printing your own hard copy.

### Step 1.

Enter a key word and optional parameters like a date range, relevancy, or search phrases. iArchives displays a list of possible matches.

### Step 2.

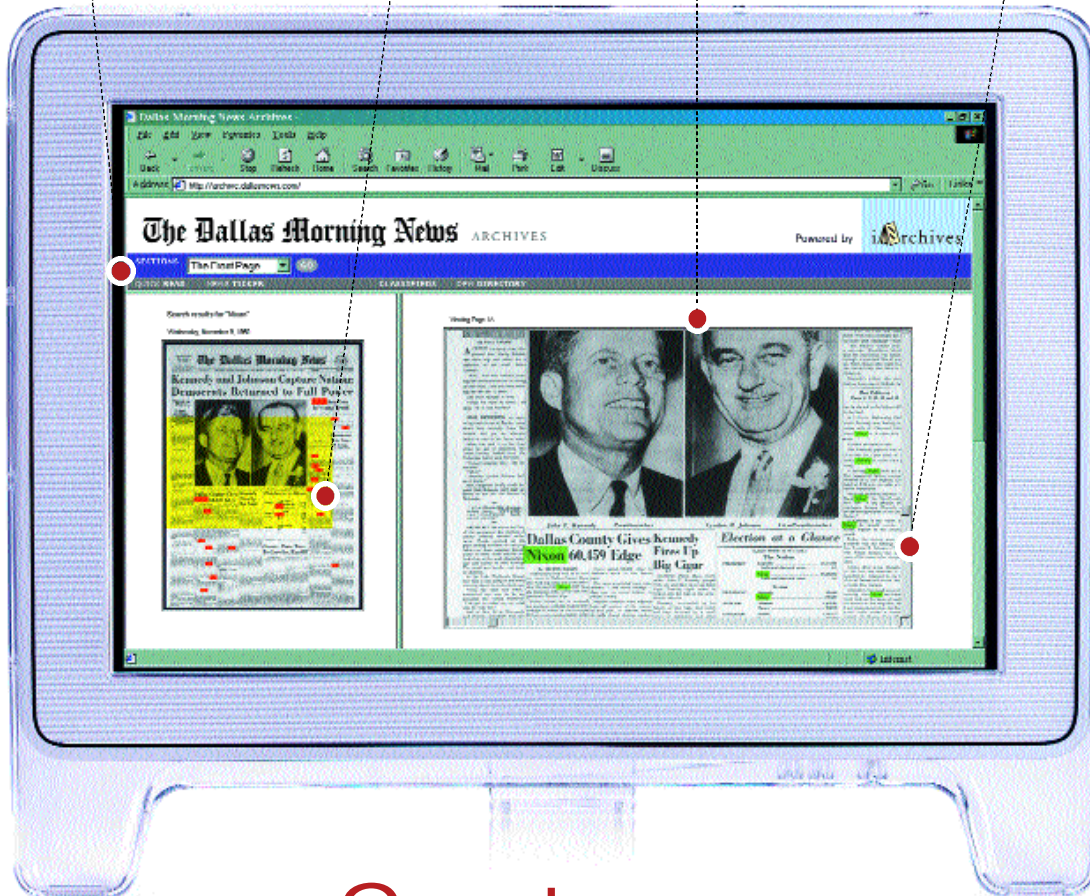

When you select the file you're interested in, the original document appears on screen with your key word highlighted for instant reference.

### Step 3.

The valuable context of your document is preserved—you'll see not just the text you were looking for, but the surrounding images and information on the page as well.

### Step 4.

View your results as a TIFF, PDF, or other file type which you can save for future reference—along with the search capabilities for that page.

# Spot on.

## Better images—better results

Searching through huge amounts of text is inherently subject to human error; facts can be easily misread or simply overlooked. iArchives results, however, are true to the original documents (since they *are* the original documents) and the search accuracy of iArchives far exceeds typical OCR outcomes. You can even choose to clean up document “noise” and get better image quality than many standard photocopies.

A quick click for the most accurate results. You can find just the text you're looking for—even when it's part of a table, chart, caption, headline or byline. Other products search only through text that has been re-keyed—and no results are as precise as iArchives'.

# How does iArchives work?

**One.** iArchives can digitize any type (or amount) of analog information.

1. 2.

**Two.** Documents are scanned to create high-quality digital images.

**Three.** iArchives processes and indexes these files into a database—customized to your specifications.

3.

**Four.** The information is stored on your web site, ours, or with the ISP of your choice.

5.

**Five.** To access your archives, simply use a standard internet browser.

4.

**Six.** View the images of your original information right on screen.

6.

## No heavy-duty equipment required

Utilizing iArchives technology doesn't mean you have to invest in huge amounts of hardware. The solution is designed to take advantage of systems you may already have in place—from servers right down to user workstations. We support most all databases and search engines, and the interface may be completely customized to your needs and specifications.

## Easy to use, easy to share

When it's time to put iArchives into action, there's nothing to sweat over. The highlighting and hierarchical features require little explanation, so all levels of your organization

can feel comfortable accessing information.

What's more, an entire team can view files simultaneously. There's no need for specialized equipment like a microfilm viewer that may be inaccessible or used by only one individual at a time. Information can be readily available to anyone, anywhere in the world. Now that's sharing the wealth.

## Try your hand at iArchives right now

You don't have to wait years to experience the benefits of digital image retrieval of your documents. iArchives technology is designed to be configured to your organization's particular requirements.

# Try it.

You can demo iArchives right now by visiting [www.iarchives.com](http://www.iarchives.com).

Or, to really experience an iArchives solution, allow us to build a customized demo for your organization. Just call (801) 764-0428 today—and learn more about the data solution you've been searching for.
